Consistency

YOU want a motor car that will serve you consistently. You want to know that your car can be relied upon day in and day out. You want high mileage per gallon of gasoline and freedom from repairs and readjustments. And you want these things, not occasionally, but continuously-day after day.

On these qualities the Maxwell has made good. It has proved its worth. When the Maxwell stock touring car set the World's Motor Non-Stop Mileage Record a short time ago it travelled for 44 consecutive days and nights and its performance was consistent.

It went about 500 miles each and every day. It went within a small fraction of 22 miles to every gallon of gasoline. It went the whole distance of 22,000 miles-probably further than you would travel in two years-without any repairs or readjustments. Every one of eight tires (two sets) went just about 9,800 miles and the others finished in good shape. For consistency and reliability this record far excels anything we ever heard of.

You can get a Maxwell, an exact duplicate of the record breaking stock car, on the partial payment plan we have perfected. All you have to do is to make the initial payment, then take the car and pay the balance as you ride. The unusual value of the Maxwell, together with our easy payment plan of purchase, is bound to dispose of our allotment of cars very quickly. Better make your reservation now, delivery later if you prefer.

How to Get the Most Value For Your Money

No mechanical adjustments to make except the turning of one screw to bring the bowl to the correct height - once a year, perhaps; every bearing oiled with clean, fresh oil before the handle makes a quarter turn; no chance to injure the spindle or spindle bearings when replacing the bowl. These are three exclusive Primrose separator features.

Just think what those features mean to you. Nothing goes wrong on a

Primrose, because there is nothing to go wrong. There are no adjustments to make for ordinary work. The milk supply bowl is firmly set in one place—the right place. The milk float goes into just the right position, either side up. Every bearing is plentifully oiled before you begin to skim. The gears are all rigidly fastened. The bowl has the cleanest, closest-skimming device and the largest skimming surface ever put into a cream separator.

The Primrose is worth more than any other separator built, and it sells

for less than many of them. Drop in and let us show you why. W. H. PRINGLE, Sole Agent for Emery Junction, Mich.
