MICHIGAN BELL HEAD ANNOUNCES PLANS FOR 1931

PRESIDENT FORAKER SAYS YEAR'S EXPANSION IS ENGINEERED ON BASIS THAT CONDITIONS WILL IMPROVE

NEW PLANT PLANNED WILL APPROXIMATE \$22,000,000

MAINTENANCE AND OPERATION WILL COST LIKE AMOUNT. PROGRAM ADDS MATERIALLY TO INDUSTRY OF STATE

The Michigan Bell Telephone company has planned for 1931 an expenditure of approximately \$22,000,000 for new construction, Burch Foraker, president of the company, announces. This work has been engineered on the basis that business and industrial conditions will improve as the year 1931 advances.

The contemplated expenditure will be made from new capital, entirely for new plant and equipment, Mr. Foraker said, and he expects the program will be followed unless conditions unforeseen arise.

In addition to the construction expenditures for new telephone plant planned for 1931, there will be spent approximately \$22,689,000 for maintenance and operation of the company's service in Michigan, making total expected expenditures of approximately \$44,689,000.

The telephone program engineered for the year includes the completion of new buildings at various points, construction of additional long distance lines and cable, and installation of considerable dial central office apparatus and other exchange equipment, for the purpose of extending facilities and further improving the present high grade of service.

Building construction planned for 1931, will cost, including sites, \$1,000,000, and new central office and subscribers' telephone equipment will cost \$14,400,000. New exchange plant expenditures planned will total \$6,140,000, including \$1,125,000 for pole lines, \$1,592,000 for aerial cable, \$1,052,000 for aerial wire, \$685,000 for underground conduit, and \$1,686,000 for underground and aerial cable.

Long distance telephone plant construction projects contemplated total \$1,000,000, including \$300,000 for additional circuits in stormproof cable.

Material requirements for the year under this program will include 44,000 poles, 500,000 pounds of bare copper wire, 3,400,000 feet of wire strand, 1,117,000 duct feet of clay conduit, 25,500 crossarms, and 1,561,000,000 conductor feet of wire in cable.

It is planned to place new central offices in service during 1931 at Saginaw, Benton Harbor, Big Rapids, Detroit, Scottville and Escanaba. Large additions to local exchange facilities are engineered at many points, among them being Detroit, Ann Arbor, Battle Creek, Grand Rapids, Jackson, Kalamazoo, Lansing, Ypsilanti, Bay City, Saginaw and Marquette. Among the long distance facilities projects under consideration are the building of a cable between Saginaw and Reese, and completion of that now under construction between Grand Rapids and Big Rapids.

The Michigan Bell company now has 678,000 telephones in service, of which 292,000, or 42.75 per cent, are dial operated. A net gain of 25,000 in the number of telephones in service is anticipated during the next twelve months.

Fresh Air and Warmth

The public health service says that fresh warm air of a proper degree of moisture and free from appreciable draft is now recognized as essential to indoor workers. The old idea that a cold room necessarily contains fresh air and that comfortably warm rooms necessarily contain bad air has been discarded.

Moths in Fur Collar
There are several methods that can be followed to get moths out of a fur collar. A simple one is to place the fur over a warm radiator or on top of a lighted gas oven with a very low flame. The moths will come to the surface and may be brushed off. Place the garment in the sun for several days.

Tree-Trunk Water Pipes
During excavations near Holborn, England, old wooden water pipes have been dug up. They consist of trunks of elm trees hollowed out, and form part of many miles of wooden pipes used more than a hundred years ago for distributing water in the metropolis.

Diseases Caused by Mind

We should be surprised if, suffering from rheumatism, we went to a doctor and, instead of being given medicine, we were told to cease our cynicism and the rheumatism would depart. Yet that may be the procedure shortly, for it has been established that certain diseases are caused by the action of the mind—the thoughts we think and the feelings and emotions thereby raised.

TELEPHONE SERVICE

MAKES A NEIGHBORHOOD OF MICHIGAN

The Michigan Bell Telephone Company is constantly improving the scope, speed and accuracy of its service, that it may continue to furnish "the most telephone service, and the best, at the least cost to the public."

THROUGH slim wires, etched against the sky . . . through cables carrying thousands of lines . . . hundreds of thousands of Michigan people keep in touch with each other . . . talking from house to house . . . city to city . . . peninsula to peninsula . . . distances that require much time for ordinary travel, but over which your voice is carried to its destination in a fraction of a second.

Over his telephone, a retailer in one city keeps in touch with wholesalers in another. A housewife calls friends who live nearby. A son at school in Ann Arbor enjoys weekly telephone visits with his parents. A state legislator in Lansing transacts business by telephone with an associate in the upper peninsula. No matter what the distance, Michigan's great telephone system will carry your voice to almost anyone, anywhere, at any time you may choose.

Today, most Long Distance telephone calls are completed while you hold the line! Today, your telephone will connect you instantly with more than 800,000 other telephones in Michigan alone! Yet, telephone service is available to anyone at remarkably low cost.

The Michigan Bell Telephone Company is constantly improving the scope, speed and accuracy of its service. Its work of contributing to the welfare and prosperity of the commonwealth goes on with increasing purpose and pace.
