THE TAWAS HERALD

A Blouse Will Give to Your

Suit the 'Touch That Tells'

By CHERIE NICHOLAS

THE STORY SO FAR: Robin Dale, a young artist, goes to Moose Bay to see her fiance, Will McPhail. When Will is accidentally killed, his brother Angus blames Robin. She goes to Angus' fish-ing cruiser to see him. While she is on board the boat sails, carrying her, Angus, board the boat sails, carrying her, Angus, Pat Donohoe and a cabin boy named Romeo toward Labrador. When they stop at the next port a man named Jen-kins boards the boat secretly. After they sail again he seizes control with the board of Romeo. Lonkins, caucht running help of Romeo. Jenkins, caught running contraband alcohol, is making a last desperate effort to escape from the govern-ment patrol. Pat, released to fix the engine, deliberately delays them. Now continue with the story.

CHAPTER XII

In the late afternoon, when for the fifth or sixth time the engine had been started, and Pat was once more secured in his old position against the forecastle ladder, Mr. Jenkins took the wheel, while Ro-meo, with a shotgun on his knee, kept guard over Angus and Robin in the cabin. Romeo was beaming and expansive, with no apparent sense of guilt for his treachery. He smiled at Robin with a flash of teeth and said said something to her, and Robin somewhat doubtfully answered his smile and said carefully. "Je ne parle pas francais."

He laughed, throwing back his head, a great guffaw; he rattled off something and she heard her own phrase twice or thrice repeated, and looked at Angus enquiringly. Angus

told her, in expressionless tones: "Easy! Sit still. He's asking you to go with him. If he tries to touch you, he'll be near enough so I can jump him."

She obeyed him, but Romeo, with a vigilant eye on Angus, the shotgun in his left hand, reached across the table to catch her arm. She leaned back away from him; and Jenkins, coming quietly through the door from the engine room, appeared at Romeo's shoulder. He caught the barrel of the shotgun with one hand, forced the muzzle up out of the way, jammed his pistol into Romeo's side. Romeo twisted his head to say something furiously over his shoulder; but he did not resist when Jenkins twitched the shotgun free. Jenkins came into the cabin, keep-ing Romeo in front of him. He drove the man forward into the engine room. Romeo shrugged, laughed again, kissed his hand to Robin and departed. They felt the boat heel as Romeo in the pilothouse brought it on its course once more.

Mr. Jenkins, with a weapon in each hand, stared at Robin in a venomous perplexity. "Curse you!" he said. "I wish you were out of here." He said to Angus, querulously: "See what I mean? That Romeo's bound to fall for any girl he sees. You'd have jumped him in another second; and you'd have been dead before you could finish your jump. He'll have us all killing each other before we're through."

After a little, Jenkins said: "I'd like to know where we are." His tone was fretful. "I figure the wind

against hers, pulling her arms back over her head, pulling her backward against him. Pat Donohoe, fast to the ladder in the forecastle, was bellowing like a bull. Then she and Romeo were thrown

backward into the forecastle by some staggering shock that brought the boat to an instant stop. A terri-ble smashing and splintering of breaking ribs and planking deafened her, and she heard the breath come out of Romeo with a grunt as she fell on top of him. Then water was gushing and flooding all around them.

McPhail's boat sank about two minutes after she struck. She had run at full speed squarely into a ledge that was too steep to allow her to slide up on it out of water, but that still sloped enough to hold her till her stern filled and pulled her

off and down. The ledge was some forty yards from the shingle beach at the foot of the cliffs, with deep water outside; but inside it, the water was shoal. Romeo was first to reach the beach. The shock of the collision threw him and Robin backward, and Robin's weight coming down on his stomach knocked his wind out. He made queer hollow sounds, trying to catch his breath, fighting to sit up. He threw her off him and Rebin heat

threw her off him, and Robin beat at him blindly with the knife, and

The roar of surf was all about them.

he squealed like a caught rat and bolted up through the pilothouse to Pat, your feet in his lap. He can keep them warm with his arms. I'm the deck.

They were left to face rain and bitter wind. The ledge on which they stood was a foot or two high, not ten feet long, water all around them, but there was a high blackness of land not far away. Angus held Robin's arm to steady her, and Pat waded off toward that blackness and shouted something to them. Angus stepped off the ledge into water to his waist, and turned his back to her and said:

"Sit on my shoulders. Straddlethat's right. Hold your feet up out of the water. Hold onto my head.' As she obeyed, Pat returned, splashing through the water, to steady her. Carrying her on his shoulders, Pat behind him with his hands on Robin's waist, Angus wad-

ed toward the shore. When he came up out of the water, Pat swung Robin to the ground, and she could dimly see that they stood on shingle in a narrow cove against the face of a bold cliff. There was some turbulence of movement a few paces off, two black figures violent in action, and she heard panting cries, and one of the figures went down and screamed and Angus leaped that way to check

the other, kicking at the fallen man. "Easy, Jenkins!" Angus cried. Jenkins said in a thick voice: "I'll kick his head in! He wrecked us!"

"You'll hang as quick for killing him as anyone else." Romeo scut-tled away, and Angus urged: "We've got to get up the cliff somehow. Tide will flood this cove. Kill him later if you want to, but let's get out of this trap first."

Jenkins this time said nothing. Romeo had disappeared along the shin-gle beach. Angus found a fissure in the cliff to serve for their ascent,

and he led the way with Robin on his heels, Pat close behind her. Robin heard Jenkins following them upward. They climbed fifty feet to a wide ledge with an angle that offered some shelter from the wind, and halted there while Angus sought some way to climb higher. While they waited, Pat backed Robin into the angle in the cliff face and pressed his body against hers to protect her from the wind and rain. Romeo came scratching up the fissure to join them, whimpering with

metallic little sounds. "It's not safe to try to go on in the dark," Angus reported. "The ledge ends, one way; and it gets pretty narrow in the other direction. We'll stay here till morning." Jenkins said: "We will not! I want a fire."

"Suit yourself," Angus told him. "We're staying here." He came to Robin. "Pat and I will keep you as warm as we can," he said. "He sat down with his back against the cliff face. "Sit between my legs," he told her. "Lean back against me." She obeyed him. "Now, Pat, you sit down between her legs and

lean back against her. There, Miss Dale, you're the ham in the sandwich." She loved him for joking in this moment. "Put your legs around

60 Was Basic Number

Unit in Ancient Babylon

The ancient Babylonian numercal system had 60, not 10, for its basic unit, reports Dr. George C. Cameron, University of Chi-cago archeologist who has been deciphering thousands of clay tablets.

While 10 can be factored evenly only by one, two, five and itself, the Babylonian unit had the advantage that it could be factored by one, two, three, four, five, six, ten, twelve, fifteen, twenty, thirty and itself.

When armored knights met, it

was customary for each knight to raise the visor of his helmet as a means of identification. This gesture has come down through all armies in the form of the salute. Traditional, too, is the Army man's preference for Camel cigarettes. With men in the Army, Navy, Marines, and Coast Guard, actual

congressman, stung into a fury by the barbed remarks of the little

A MAN needs two kinds of brains. One to say witty, brilliant things and another kind to keep him from saying them in the wrong place. If the time doesn't suit you, suit yourself to it.

Once the foresighted farmer planted his watermelons in the center of the cornfield, but with all those airplanes overhead-where now?

As a man thinks, so he is, therefore some people never are.

A woman is always perfectly sure she is right until it comes to backing up her opinion with

money

It is only the very rich who are emphatic about the futility of riches. Some men are known by their deeds-others by their mortgages.

The smallest member of the United States senate was Georgia's Alexander H. Stevens, later vicepresident of the Confederacy. He was less than five feet tall and weighed somewhat under 80 pounds.

One day an out-sized western sales records in their service

would set us off to the southwest, mostly; and we've been drifting half the time all day. How fast is this boat?"

"About eleven."

"You can't see fifty yards ahead of you in this thick. We'll have to slow down later, watch our step. I figure by midnight we'll be getting toward shore." He asked Angus al-most plaintively: "What do you think?"

"You're the captain. It's your funeral."

Jenkins' lip twisted as though with sudden pain at that word. He scowled at Robin. "Go cook supper," he said shortly.

She nodded and went past him into knotted cords till Robin thrust the the galley. She stood trembling and knife at him. shaken, shivering, staring dumbly in front of her, wondering what to' ashamed of her own voice so shrill cook. Bacon and eggs? She took the and high. Angus slashed at Pat's knife from its slot and began to slice bonds, and the lights went out, and the bacon. She was bitterly cold; under their feet the inclination of and she thought a hot drink would the deck increased as the boat setwarm them all, and found a onetled by the stern. Angus shouted pound cake of cooking chocolate in some triumphant word, and then he the stores. When the bacon was fryand Pat pushed Robin up into the ing, she opened the wrapper at one pilothouse. When she came out on end of the cake, preparatory to slicthe deck already steeply sloping aft, ing some thin flakes off the chocosleet stung her cheek, and the wind late. was cold. Pat and Angus helped

Someone caught her left arm and twitched her around, and she saw Romeo's laughing eyes and his flashing teeth here close beside her. He had left the wheel, come down into the forecastle, thus seized her now. She jabbed at him blindly with the knife, and he recoiled and dodged; but then his hands like striking snakes caught both her She twisted desperately wrists. around till he was behind her.

He still gripped her wrists, holding her hands up over her head, the knife in one of her hands, the chocolate in the other. Her arms were crossed by her own movement when she twisted around. She could see through the engine room Mr. Jenkins in the cabin door. He had risen as though to interfere; but he was looking back into the cabin, his pistol levelled at Angus there, his teeth bared. He shouted like a scream some word she did not hear; and, even pinned as she was, her hands high in the air as though she were a mutinous sailor triced up by the thumbs, she understood with a peculiar lucid clarity that Mr. Jenkins dared not come to help her for fear Angus would take him in the rear. Romeo laughed in her ear, his head and was gone.

When the boat struck, Angus was on his feet in the cabin aft, facing Jenkins' pistol. The shock threw him against the cabin bulkhead; and it hurled Mr. Jenkins headlong into

ing over Jenkins, to Robin. By the

time he reached her, water was

pouring in through the shattered bow. Jenkins, without a sound, dart-

ed past them and scrambled up into

Angus dragged Robin to her feet

and shouted, "All right?" She stam-mered something, and he turned to

free Pat. Pat's arms were fast to

the steel uprights of the ladder: and

Angus wrenched desperately at the

"Here, take this!" she screamed,

her forward along the slippery turtle

deck; and they saw the ledge solid

and black under the bow, and Pat

jumped down and turned to reach

up for her. She was still holding

that cake of chocolate. To free her

hands, she pulled up her sweater

and stuffed the chocolate inside her

flannel shirt. Then Angus swung

her down into Pat's arms; and the

roar of surf was all about them, and

the wind blew cold and thin, and

Angus shouted something about

freeing the small boat lashed in

chocks on top of the cabin, and dis-

appeared back along the deck. The

sleet in her face blinded her and

"Come away, sorr! She's going!"

Robin wondered stupidly who was

going where. Then the cruiser slid

an inch backward off the ledge, and

six inches, and a yard. Robin screamed, and Angus appeared.

above them on the high bow and

jumped down and fell on his hands

and knees on the ledge at her feet,

and she caught at him to keep him

from the water. The cruiser slid

away from them off the ledge; she

Pat bellowed warningly:

the pilothouse and disappeared.

Jenkins demanded: "What about me and Romeo?" the engine room. Angus scrambled to his feet and came at a run, jump-

can change places.'

"Get as close to us as you can," Angus advised him. "We'll keep each other warm." Jenkins tried exploring the ledge

on his own account before he would be satisfied; but Romeo huddled down beside them, and so presently did Mr. Jenkins. They pressed together like puppies on a cold night, seeking to conserve the heat in their bodies against the penetrating cold. Romeo whimpered beside them, huddling closer. She thought she did not sleep, till she opened weary eyes and saw a dawn that was only grayness breaking through a veil of rain.

They were all so numb with cold that they were inert as snakes in winter. Angus stood up and beat his arms for warmth; and as the light increased he worked along the ledge toward where it narrowed dangerously. They watched him tor-pidly, till fifty feet away he turned and called:

"Come on! We can go this way." They moved sluggishly. Pat Lelped Robin to her feet. Her legs were stiff and cramped, and she ached all over. She and Pat joined Angus, and he showed them a wider ledge six feet below this one on which they were, which led to a broken slope of rubble up which they could ascend. Robin stumbled after Angus, Pat on her heels. They climbed a triangular scar in the face of the cliff, narrowing to a point at the top where there was a little cascade. Centuries of frost had here broken down the solid rock, and toppling slabs and boulders made a grout slope that ex-tended from the top of the cliff down to the sea. Once Robin looked back and wondered what had become of Jenkins and Romeo. They emerged at last on a naked ledge that sloped upward to a rounded dome, a hundred feet above the Angus strode swiftly ahead, sea. eager to see what was beyond; but when Pat and Robin came to his side, she looked all around in a dawning hopeless comprehension. She could see lead-gray water, sullen under the low rain fog, in every direction. She said stupidly:

was a white blur in the black night "It's an island. We're on an isfor a moment. Then she slid under land!" (TO BE CONTINUED)

on crepe, also smooth acetate jersey, are shown with youthful peter pan collars this year, the high round Pat, when you get cold, you and I line fitting nicely over cardigan jackets and sweaters, as well as giving a nice, neat look for jacketless wear with slacks, shorts or sports skirts. Money Divorce Cause

Money, or rather the lack of it, is the most common cause of marital troubles, according to Circuit Judge Paul D. Barnes of Miami, and he should know, for last year he handled 4,000 divorce cases. "Willingness to live within income is the most important thing I can say to young married couples," Judge Barnes said. "The tendency to exceed income seems to be a fashion of the times, but it's probably the most disastrous habit married cou-

BROOK'S SCRAP METAL YARD **TAWAS CITY**

South African Racket

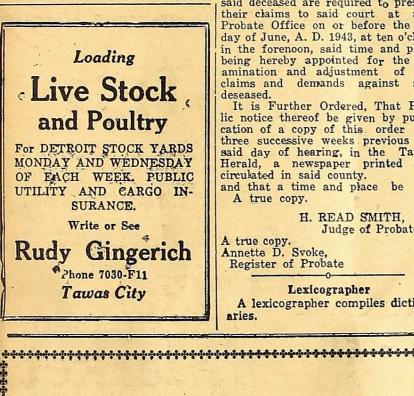

Cape Providence, South Africa, is preparing drastic action against the money-making racket of "jackal breeders," it is stated in Capetown. It has been discovered that in parts of the province professional hunters, who destroy jackals for bounties have been capturing only the cubs, allowing adult animals to escape, and thus providing for the next season's "crop." It is suspected that in certain districts there are secret jackal breeding establishments, the owners of which make big profits by constantly turning in very young jackals. Last year the record number of 36,000 were destroyed at the standard rate of \$2.50 an animal. In some districts \$3.75 is paid.

Muminated Aisles

Going into the gloom of dark cinema houses, people are likely to stumble, bump into others. Ushers with flashlights are nuisances; small lamps placed near the aisle floora illuminate only small areas. American Cyanamid company announced what it considers a better idea: aisle rugs treated with fluorescent dyes, bathed by invisible ultraviolet radiation from small tubes. Such rugs glow softly all over, interfere with nothing on the screen.

Heavy Water Is Stimulant Tests on animals show that when heavy water is administered it produces an effect similar to that of adrenalin, a hormone, which throws the body into its greatest state of activity.

If you haven't gotten around to buying a Second War Loan Bond, stop and think what it would mean to you if our soldiers hadn't gotten round to the fight.

AS Michigan's war industry hits full stride, more and more long distance calls have to be made-war calls vital to victory. The burden of calls on many long distance lines has reached a critical stage. Central office equipment, fully manned with operators, is being used to capacity. At times, each unimportant call, regardless of its destination, affects the speed with which all other calls can be handled. Many calls are delayed-some for hours. And materials to expand the system cannot be had.

Yet, war calls must go through promptly! So it is necessary that we all curtail both our personal and our business use of long distance. Therefore, please-1. Make fewer long distance calls - and keep them short.

2. Give the operator the number of the telephone you are calling, if possible.

3. If your call can't go through at once, stay near the telephone ready to talk when the operator notifies you.

Washington, D. C.

AIR PRISONERS IN GERMANY The fate of American fliers in the Doolittle raid has raised the question: What happens to airmen who go down over Europe? Here is the answer from an officer of the U. S. bomber command in England. If fliers bail out and get down safely over France, Belgium or oc-

cupied Europe, their chances of get-ting back to England are pretty good. They become prisoners of war, but in the course of exchanging prisoners, they may soon get back to base.

If they bail out over Germany, there's not much chance of getting back. But so far as we know, the treatment of air prisoners is similar to that of other prisoners, and varies according to rank.

There is one incident, however, that damns the German record—the story of Paddy Finucane. Most peo-ple suppose that the famous RAF ace lost his life because his Spitfire crashed into the channel after being hit over France.

The truth is-though this has nev-er been published-that as Finucane was falling, he was strafed by German machine gunfire, and he was already dead when he hit the water. Thus a new meaning comes to Finucane's famous phrase, "This is

it, chaps."

TOUGH JOB When you sift down all the hulla-baloo about Elmer Davis and his Office of War Information, the only valid criticism you can make against the drawling Hoosier is that he is working too hard. The last two weeks when he went on the air, he was so exhausted he had a stand-by alongside ready to take up his script if he collapsed.

Davis works far into the night, tries to read all that his voluminous office produces, sees almost everyone who wants to see him.

But given a tough situation, basically he has done a good job. Sena-tors like Montana's Wheeler and Nevada's McCarran, whose acid digestive systems are always poisoning their political outlook, make a wry face at Davis. But Wheeler and McCarran are always demanding more facts and inside fact is that Davis has been fighting their battle in keeping the American public informed.

Most of Davis' fight is getting news, squeezing it out of government bureaus which don't want to give, making the army and navy release facts which show up their mistakes, rowing with Czarubber Jeffers because his estimates on tires are too TOSY.

When Davis stepped down from his well-paying radio job to correlate government information, everyone envied him his job, thought he had a softie. But the job of digging news, accurate news, unpleasant news out

A LTHOUGH the new wartime A baseball has been endowed of-ficially with quite lively qualities, those comparatively few outstand-ing batsmen remaining in the game are prone to argue the point.

Rubber has given way to balata compound in the composition of today's ball. Experts say it lacks the jackrabbit tendencies which enabled clubs to pile up topheavy home run records.

A Detroit scribe questioned the Tigers after a recent game with the Pirates. And,

he declared, 'you can take the word of the Tigers for it, the ball that will be used in the American league this season is deader than a fossil fish." Roger Cramer, veteran

Tiger outfielder, summarized the situation thus:

"When I hit that ball I thought I had whacked a hollow stump. Al-though I didn't know that the ball had been changed. I was suspicious. (Manager Steve O'Neill hadn't told the boys that the 1943 ball was being used) I naturally concluded that

used.) I naturally concluded that somebody had deadened the balls by putting them in the ice box. You know, some teams used to do that with the old ball once in a while, when they thought a dead ball might do them some good. But when Steve told us we had been using new balls, I knew that we would be blasting no rabbits this season."

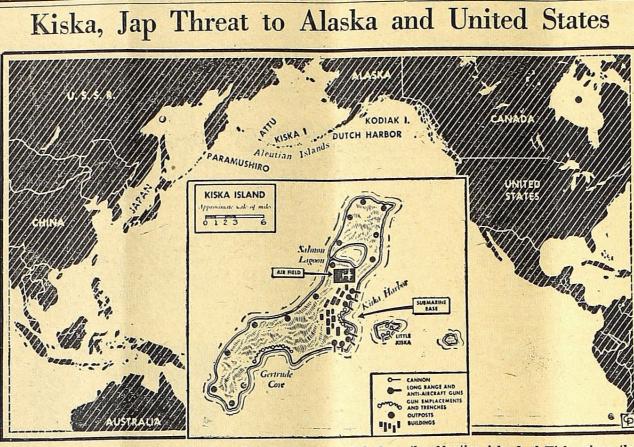

Nothing New

The balata model stirs the memories of old timers who were familiar

with the dead ball. In 1913, J. Franklin Baker, infield-er with the Philadelphia Athletics, earned the name "Home Run'' Baker by clouting the terrific total of 11 home runs. That same year the eight

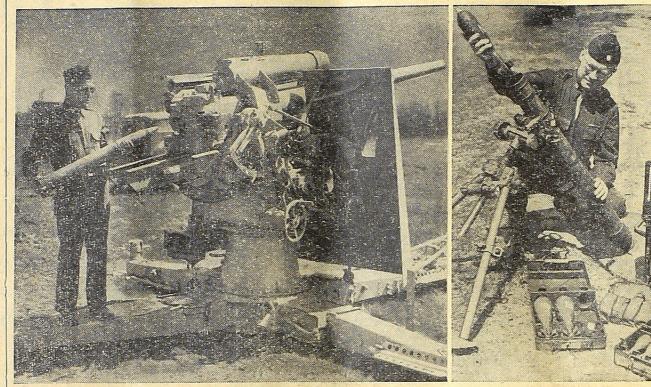

teams of the American league hit 158 home runs. Philadelphia led with 33, New York trailed with eight. In 1942, the American league home run total was 533. The National total was 538. The Yankees had the leadership in the American league with 108. The Giants topped theirs with 109.

The fast ball didn't make its appearance until 1919. In 1920, Babe Ruth went to New York and started

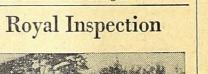

This map shows you what the busy Japs have accomplished on the Aleutian island of Kiska since they occupied it last June. Despite repeated bombings by our air forces, the Nips have succeeded in installing formidable military establishments on the island with a view to future operations against Dutch Harbor, our naval base in the Alaskan area, and against Alaska itself. Proximity of the major enemy base at Paramushiro makes it possible for Kiska to be reinforced with comparative ease.

Captured Enemy Weapons Compared at Aberdeen, Md.

The foreign material branch of the ordnance department of the U.S. army has in its possession many enemy weapons that they have brought to this country for comparison purposes with our own weapons. At right Lieut. Edwin Davis holds a shell at the breech of the "mystery" 88-mm. anti-aircraft and anti-tank gun that was talked about so much in the beginning of the war in Africa. Right: Colonel Jarrett holds a mortar shell for the German 81-mm. mortar, which almost compares with the American mortar in design.

Acidity Dispelled

Acid Condition May Even Be Beneficial

Soil acidity is a "bugaboo that farmers for years have been uselessfarmers for years have been useless-ly fighting," according to Dr. W. A. Albrecht, chairman of the soils de-partment of the University of Mis-souri. As a matter of fact, acidity may actually be beneficial instead of harmful if proper soil conserva-tion measures are used. "It is not the acidity in soils that is injurious," Dr. Albrecht ex-plained, "but the shortage of nutri-ents that are replaced by acidity. Given the proper fertility, plants will turn in their customary or usual

turn in their customary or usual of soil acidity. This acid condition is merely a case of increased short-age of plant food nutrients for which crops suffer.'

Dr. Albrecht cited experiments with soybeans in which increased soil acidity made both calcium and phosphorus actually more effective than in more neutral soil, improved the feeding value of forage and kept the sand element lower. -

"Our experiments indicate that it is no longer necessary to fight soil acidity," he declared. "On the contrary, acidity is beneficial if lime or calcium, phosphorus, potash and, other plant foods are utilized to restore full fertility and if soils are helped to maintain their needed stores of organic matter by means of sod crops or corresponding recuperative rest periods.

'We can now say that 'acid tolerant' legumes have been discovered. But they tolerate acidity only when fertilizer materials are properly supplied in balanced amounts." In this connection it was pointed out that the three vital plant foods on which crops depend most are: 1 on which crops depend most are: 1— nitrogen, which encourages early and abundant growth, builds protein and develops the fleshy portion of roots; 2—phosphorus, which hastens the ripening of seed and promotes early maturity; and 3 — potash, which is the balance wheel, enabling a crop to make better use of the other plant foods, develop resistance other plant foods, develop resistance to disease and maintain an improved

Wing Talk By Robert McCormick

(WNU Feature-Through special arrangement with Collier's Weekly)

One day, Major General James Chaney, commander of the First Air force at Mitchel Field, New York, was flying comfortably at 10,000 feet in a twin-engined bomber. The general was looking down distastefully at the 30-foot waves, when he thought he saw two impudent little yellow-winged planes sitting on the water beneath him. He made his pilot circle and came down to in-vestigate. He discovered that the planes weren't actually on the water. They were low over it, looking for submarines. They were units of the Civil Air patrol.

"How far is it to land?" the horrified general asked the pilot.

"Seventy-one miles the shortest way," the pilot said.

Chaney wrote Maj. Earle Johnson, national commander of the CAP. "I just wanted you to know," he said, "that you have no draft dodgers in that bunch."

Incidentally, CAP men are not de-ferred from the draft. Most of them have dependents or are overage or physically unfit for regular military luty.

CAP Part of OCD.

The CAP was started a week be-fore Pearl Harbor as part of the Office of Civilian Defense. Plans were worked over for a month before that, by a committee of air-conscious people who refused to be skeptical. The main idea was to use the thousands of private pilots, planes and air enthusiasts, in work which could be done by men and equipment somewhat less highpowered than that used by the army air force.

Since then, the CAP has flown more than 14 million miles—top average is 87,000 miles a month.

A wing was set up in each state, under a wing commander.

The boys and girls (several CAP groups are all women) meet three nights a week, usually, and study navigation, radio, meteorology, mili-tary drill and military courtesy. Those who bring their own planes get paid around \$15 an hour, depend-ing upon its horsenower, when it's ing upon its horsepower, when it's actually in the air. But only the depreciation on the plane goes to the owner; the rest goes into a kitty from which all owners buy parts, tools and similar essentials, when they can get what they need.

of the government is not soft. And it is not popular.

Davis is a good newsman. Being such, he is not popular, never will be in some quarters.

Note: Davis did his best to release the story on bombing Tokyo long ago. Several times he urged the White House that the American public should know the facts. Earlier, when the Japs released a picture of U. S. fliers supposedly captured in the Tokyo raid, Davis wanted to point out the truth, namely that these were naval fliers, not Doolittle's. They had been captured in a naval battle. This explanation was broadcast to foreign countries by OWI, but Davis, through no fault of his, was not permitted to tell folks at home.

FDR'S CONGRESSMAN

As commander-in-chief, the President has supreme powers in the conduct of the war, but he is just another citizen on the books of the Hyde Park, N. Y., rationing board. At a recent White House meeting, the President was telling three congressmen, Gale, Republican, of Minnesota, Jackson, Democrat, of Wash-

ington, and Manasco, Democrat, of Alabama, about the "red tape" involved in buying meat and groceries on his trips home to Hyde Park.

"I have my problems with point rationing the same as you fellows," he grinned.

"Why don't you write your con-gressman?" suggested Republican Representative Gale.

The President reflected briefly, then threw up his hands and roared with laughter.

"Oh, no," he exclaimed, "not that!"

The man who represents the Hyde Park district in congress is Hamilton Fish, one of the most vitriolic, vituperative foes the President has in congress.

MERRY-GO-ROUND

A high ranking army officer, just back from a U. S. tour, makes this observation: "High morale may be lowered by too much talk of postwar planning, which makes the boys think the show is almost over."

If the Japs were still in their Washington embassy, they could set their clocks by lanky Will Clayton, astute deputy to Jesse Jones, who walks three miles to work every morning. He passes the defunct Jap embassy precisely at eight.

with his big bat to establish a myriad of records. In 22 years played in the majors he compiled a total of 714 home runs, hitting 40 or more in 11 different years and establishing a record of 60 round trips in 1927. His lifetime major league batting average was .341.

Contrast that with "Home Run" Baker's record. How much the lively ball can help batters is apparent by the increase in hitting noted previously, the mounting home run and extra base hit totals and the ever-growing .300 division.

Sisler's Record

The career of one man is worth considering when weighing the merits of the rabbit ball against those of the lively ball. George Sisler is the individual in question. One of the greatest players of all time, his career lasted eight years, until eye trouble stopped him. He batted against the dead ball for five years and against the lively one in his last three years.

Against the dead ball, Sisler's five-year average was .330. His highest season batting average was .353 and his largest total of hits was 190. Against the lively ball he had a three-year average of .399. His largest number of hits was 257 and his

best batting average was .420. Ty Cobb, Harry Heilmann and others who were up against both

types of ball said that the lively ball traveled 50 to 60 feet farther than the dead one.

But-one thing must be kept in mind. The public likes plenty of hitting. John Q. Fan prefers home runs to stolen bases. Proof of that lies in the fact that American league attendance increased more than one million in 1937, one of the heaviest hitting seasons. The number of hits is often reflected in the box office.

SPORTS SHORTS

◀ The oldest horse known to science is an 11-inch fossil dug up 40 years ago in Wyoming and now in Amherst's museum. It is said to be about 45 million years old.

C Of the 33 players on the Washington Redskins' football squad last year, 23 were married men. € Jimmy Foxx is said to draw \$8,000 a year as an oil and leather sales-

man a 91/2 on the other.

Shang-Ri-La field, perhaps strangest army air force field in the nation, has been opened at Glendale, Calif. Duplicating field conditions in remote operating areas, the odd field offers practical knowledge of how planes and engines may be changed and serviced under actual combat conditions. Dispersal of ships and camouflaging of aircraft is practical.

Marine Ace Reports Good News

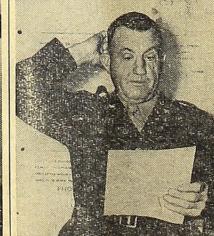

Capt. Joe Foss of the marine corps, who scored sensational air victories while serving on Guadalcanal, is shown reporting to his boss, Lieut. Gen. Thomas Holcomb, commandant of the marine corps, in Washington. Foss, who hails from Sioux Falls, S. D., shot down 26 Jap planes to tie Capt. Eddie Rickenbacker's World War I record. Photo shows General Holcomb and Captain Foss.

Princess Elizabeth, elder daughter of King George of England, is shown inspecting the grenadier guards, famed regiment of which she is colonel. The princess wears the regimental cap badge in her hat. She was 17 years old on April 22.

Staff Sergt. John Brown at the army airfield at Bainbridge, Ga., is puzzled. Although, he's been in the army since 1919, he is getting a notice from his draft board at Evergreen, Ala. What worries him is will he get that furlough to go home?

I understand the Americans are loing very well on the food front, too.

> Agriculture in Industry

By FLORENCE C. WEED

PRUNES

All prunes are plums but not all plums are prunes. Washington and Oregon grow an Italian variety while California produces the French prune. These are distinguished from other plums in that they will not ferment when dried without removing the pit.

At the University of California, oil has been crushed from pits of prunes which is rich in vitamins, reddish in color, with a pleasant aroma and taste. It will likely be used for spraying prunes to aid them to retain their moisture so that they will be juicier when they reach the consumer. The canning of prune juice is a growing industry since the competition of fresh fruits and juices has curtailed the dried prune market.

Prunes, grown almost entirely on the Pacific coast, now exceed the amount produced in foreign countries. It was not until 1870 that the first commercial orchard was planted in California and the growth of this industry has been rapid.

In California, the plums are dried for six to ten days by the sun. In Oregon and Washington, they are cured 12 to 48 hours in evaporators. After drying, they are put into bins to "sweat," then they are graded and packed. Sizes range from 20 to 30 in a pound up to 100 to 120.

Agricultural Notes

Safety First now means better farm production and full participation in war activities. A first aid kit or cabinet might well be placed in every kitchen.

Building supports, such as foundation and piers, must be maintained to prevent sagging and distortion of structure. Wood sills should be kept

Volunteers Must Go Anywhere.

There are 21 CAP bases from Mexico to Maine, and a volunteer is just as likely as not to find himself sent for 30 days to a forsaken hole miles from the nearest civilization, where he has to live by his wits and courage.

One southern base, more than a hundred miles from the nearest hospital, has among its active workers a well-known doctor, who serves one month each year instead of taking a vacation. Out over the ocean one day, he was notified by radio that another man at the base was sick.

The doc tore back to find a young mechanic with a ruptured appendix. A workshop bench was made into an operating table, and with the few unspecialized surgeon's tools at hand, the doctor went to work. The young man is doing nicely today at the same old stand, and the doctor is still placidly flying the submarine patrol on his time off. When the CAP first got the idea that its little put-puts could be death on subs, all even faintly orthodox military minds were properly skeptical. Finally Major Johnson, who throws off enthusiasm for the project in all directions, wangled \$18,000 for a 30-day trial at a base near one of the worst ship graveyards on the East coast. The usual complement of a base commander and 76 men took over, with their customary collection of odds and ends for equipment, and went to sea in the aerial equivalent of pea-green boats.

Within ten days, General Bradley of the army air force came up to inspect the base. Ten days is scarcely time to set a new apartment in order, but he found the little airplanes buzzing over the ocean with such effectiveness that sinkings had dropped off 85 per cent.

Yet the planes carried no bombs, and could only radio the army or navy for help when they found a sub. Another base was set up, and another and an-other, and at each one, the sinkings went down.

One day two CAP planes found a sub. They badgered it until it rammed into a mudbank, but they didn't have as much as a rock to drop. No help came and the sub got away. When Gen. Hap Arnold, chief of the air force, heard of the incident, he blew up. The patrol off the ground by masonry supports. planes would carry bombs, he said.

THE TAWAS HERALD

RAILROADS AND THE AMERICAN WAY

AT ELEVEN O'CLOCK on a Saturday morning I stood at the water's edge of the Pacific ocean. Before I had completed my luncheon in a dining car, a railroad train had carried me eastward and upward to where I was nearly 4,000 feet above the ocean I had just left. By dinner time I was down again to less than 1,000 feet above sea level. Before time to retire I had been up again to nearly 3,000 feet and then down to almost sea level. When I got out of bed the next morning, I was up to considerably more than 6,000 feet.

Such are some of the ups and downs of railroad travel through the western mountains. To achieve them, the train winds through deep gorges, follows winding arroyos, cuts through mountain spurs with long tunnels.

Building such railroads called for faith, vision, genius and ability. Building them meant faith in the nation, in its institutions, in its future. It meant vision on the part of the men who promoted them. They could see the future of that portion of America which lay west of the mountains and the deserts; they could see it as a land of homes, a productive land which would provide things needed by American people. It took genius, greater than that of the average to figure the "how" of mastering those terrific ups and downs. It called for constructive ability to apply the genius, the vision and the faith.

Construction of our transcontinental railroads, today carrying the products of the East to people of the West, and those of the West to people of the East, opened a new America. It made possible the farm homes of the West; the cities and towns that are as much a part of the nation as are those of the Atlantic seaboard. It made us a homogenous people. Directly and indirectly, our railroads have provided millions of jobs; they have added billions to the national wealth.

Most of the men who built those railroads have passed away, but the roads, cities and towns, the farms and the jobs did not die with the men who built them. We who live after them are profiting from what they did. These railroads are serving us and the long trains that roll over them each day tell the story of their service to us.

Railroads are one of the products of the American system of free competition that has made America the great, wealthy, prosperous nation of today. They make possible our fight for freedom against our enemies. They were born of the opportunities and the encouragement our American system offered to men of faith, vision, genius and ability.

We are really at but the beginning of our possibilities as a nation. To reach the zenith, we must continue to offer opportunity to men of ability, that through the faith, vision and genius of such men may be provided more jobs, more access to markets for our farms, opportunities for growth of our towns and cities. All of these things mean a livelihood for our ever - increasing population. Maintaining the American system will do such a job, from which we all will profit.

Ceiling Zero, one-fourth mile visiquest a plane for a cross country bility with fog is all summed up in the figures "0¼F." If the ceiling is flight, he submits his flight plan to the weather officer and it is rehigh it may be only estimated, or it turned with the present weather con-ditions noted all the way to his desmay be measured accurately by means of helium-inflated balloons in the daytime or by means of a clin-

ometer and spotlight at night. Not only do the figures and letters in the report reveal facts to the weather man, but their absence may also indicate certain conditions. For example, the absence of a figure for visibility would indicate that the visibility is a minimum of 10 miles. Visibility is determined by actual observation of known landmarks from the station tower and is meas-

ured in a horizontal direction only. The barometric pressure is also given in the report along with the temperature and dew point which is determined by an instrument called a psychrometer. Knowing the temperature and dew point, a pilot can es-timate the possibility of encountering fog-one of the greatest hazards to flying

Wind direction is indicated in the report by an arrow followed by a figure giving the velocity of the wind. This information is obtained by means of an anamometer, which registers the surface wind, and by means of a theodolite and balloons higher altitudes.

Home to Aerial Castaways for a Month

Here is the entrance to the shelter constructed by 20 army men who were crew members and passengers of a giant C-87 army transport plane, forced down in the north woods, where the men not only managed to survive for more than a month but actually gained weight. The men were rescued and arrived safely at Presque Isle army airfield, Maine. Their big plane was flown out under her own power after being equipped with special skis.

America In Action

AAF RECRUIT

Fresh from the recruit reception centers, they come to the army air forces basic training centers-big guys and little guys, bow-legged cowboys and short, squat taxicab drivers, boys from the farm.

This is the material that the army air forces technical training command basic training centers take over and in the remarkably short time of about a month whip into something resembling hard, tough, well-disciplined soldiers. They don't which are used to test the winds at become veteran fighting men overnight, but under the rapid-fire im-

pact of the army air forces' training they quickly lose their civilian characteristics and are on their way to becoming integral parts of the air forces that will fight around the world.

First on the recruit's program is a physical examination and bloodtyping. The designation of blood is later imprinted on "dog tags" along with other identifications. Their first hint of what life in the air forces will be like is given them in a friendly "orientation talk" by their squadron commander. Wholesome army

food and a full night's rest prepare the men for their next step-a threeday pre-training period. Then they receive their first introduction to the army's rigorous physical training program.

Immediately upon completion of the three days of pre-training the men plunge into a four-day period gives grace for holy of "processing." One day is spent powers for service.

the classification department. in Here the trainees receive aptitude tests to determine which of the many highly technical airplane maintenance courses of the air forces technical training command they will enter upon completion of their basic training.

Every recruit is given a personal interview during which expert consultants interpret the results of the exhaustive tests the man has undergone. Those trained interviewers decide what specialized further training shall be given him, and thus ends the "processing" period.

Next morning, the men are told at reveille that they are "first day drill" men. For the next few weeks tion of their training program. On pass in review before the post com-

PETER AND JOHN PREACH TO SAMARITANS

LESSON TEXT-Acts 8:14-25. GOLDEN TEXT-Lift up your eyes, and look on the fields; for they are white al-ready to harvest.-John 4:35.

The Church as it grows has problems, and so God calls leaders to serve Him in meeting and settling them for His glory and the good of the Church.

Philip had gone to Samaria (as a result of the first persecution of the Church) and there he had been used of God to bring many to faith in Christ. Now that the new groups of believers needed guidance and instruction, Peter and John were sent to help them (v. 14).

A proper understanding of, and at-titude toward, God's gracious gift of salvation is of first importance. New converts must recognize that it is a gift: that it cannot be earned or bought, and that it issues in a life of service and testimony.

All three of these matters are covered in our lesson.

I. Spiritual Life and Power Is God's Gift to Believers (vv. 14-17).

The Holy Spirit was received by these early members of the Church by the laying on of the apostles' hands, but later He came directly into the believer's heart the moment he had faith in God. This is now our blessed privilege, and the provision for our every need as followers of Christ, to recognize the in-

dwelling Holy Spirit. What a glorious truth it is that the believer is indwelt by the Holy Spirit, He who is a divine person, not just a power or influence (I Cor. 6:19). Thus every believer, including the humblest as well as the greatest, has in him the One who gives spiritual life and power, who gives grace for holy living, and em-

The greatest power in all the world—the power of the infinite God —is thus available to every true and yielded believer, as God's free gift. Gone then is all boasting of our own strength, and gone are all excuses for weak and careless living. The power and grace are His, and He gives them to us as His gift. Christian friend, are you allowing the Holy Spirit who dwells in you,

to infill and use you as He will? II. Spiritual Life and Power Cannot Be Bought by Works or Money (vv. 18-24).

Men of this world are so used to putting their trust in money that they come to think that one can buy anything. To them every man and they will go through the major por- every desirable thing must have its price. Let us be clear that there the final day of training the men are men who cannot be bought, and that the best things in life bear no

IS MONEY AVAILABLE FOR BROAD PLANNING?

FOR THE PAST 12 years, we, as a nation, have operated on a system of deficit financing, of spending more each year than we take in. During those 12 years, our governmental debt has increased from some 20 billion dollars to more than 140 billions, with the probability that it will be over 200 billion by the end of 1943. During those same 12 years, taxes collected from the people have grown from some four billion to approximately 35 billion for 1943.

Now comes our National Planning board, with a post-war program calling for greater government expenditures than have been made during the war. It is proposed that we police and feed the world; that we provide each American with a comfortable living; that we finance all business in converting from wartime to peace-time production; that we insure all who are able to work with a job at present high standards of wages. It would mean the government operating the big business of the nation as a mortgage holder. It would mean the end of that American way of life we have known throughout our history as a nation. It would mean the end of free enterprise.

If people of America want to adopt such a program, where will we get the money to pay for it?

* * * IN THE PRODUCTION of an is-

sue of the average eight-page newspaper, there are more than 200,000 chances for error. It is remarkable that so few actually get through to the reader. * * *

WHEN THE WAR IS OVER, it will be much like the morning after -it will be hard to get down to earth and reasonable wages.

WE MAY NOT LIKE his theory of government, but we do like that Russian soldier.

price tag. A mother's love, friendship, fellowship with God-priceless they are, but not for sale.

Above all let it be clear that eternal life, and the power of God the Holy Spirit, cannot be gained by piling up good works, nor by payment in the coin of this world. Simon Magus wanted this power

to improve his business as a magician. He made a very gross proposal, but one wonders whether he was any more to be censured than many in the Church today who are doing the same thing, though by more cultured and skillful methods. Not only are there those who are trying to buy their own way into heaven, but also those who by hold-

ing the purse strings, try to control the message of the preacher. What about those who by their financial gifts seek to gain control of church organizations?

Their efforts are doomed to ultimate failure-God will see to that! -but in the meantime they do much harm to the cause of Christ. Many a church and pastor would like to rise up and say with Peter, "Thy money perish with thee."

III. Spiritual Life and Power Should Result in Testimony (v. 25). Peter and John set the Samaritan Christians a good example as they went back to Jerusalem, by permitting the Holy Spirit to use them to testify and to teach the Word of the Lord in many of their villages.

One of the great hindrances to the carrying out of the great commission has been that Christians have received spiritual life, and even spiritual power, as though it were something for their own gratification or comfort. God saves us to serve Him in testimony and in life.

The Holy Spirit does not speak of Himself. He guides the believer in all truth (John 16:13), particularly the truth regarding Christ. The Spirit's primary interest is to glorify Christ (John 16:14).

It follows then that the Spiritfilled believer will be busy about speaking for Christ and glorifying His name. The Holy Spirit is ready to teach even the words to say that Christ may be lifted up and men be

saved. Peter and John, as good leaders of these new Samaritan believers, gave them by word and example a good foundation for growth in grace and usefulness to Christ.
