ORDER YOUR SNOW · BIRD

Because every year we've ordered more and we still sell out. Even the factory's increasing production can't keep up with the amazing demand.

Snow Bird's popularity is no accident. It's the most soundly engineered snow thrower available. It's the only snow thrower that performs the three essentials of snow control. Feeds snow with a slow-speed rotary auger into a high speed blower that discharges the snow through an open-throated controllable chute that lets you aim the snow precisely. Easily handles snow that's wet and heavy, dry and flaky, or crusted. Model 226 Snow Bird cuts a 22" swath in deep snow with a new 4 h.p. easy-start snowproofed engine. Model 263 cuts a 26" swath through the deepest snow with husky 6 h.p.

SEASON! SEASON

NOV. 15-30 -

Nov. 9-24

Michigan hunters with permits will be allowed to shoot antierless deer during this fall's regular firearm season in 46 northern areas where whitetails have overbrowsed their dwindling winter food supplies or caused serious crop damage. Slightly over 156,000 permits will be issued by the Conservation Department to shift a potential winter loss of 60,000 surplus animals into the legal kill column for sportsmen. Permit applications will be available from hunting license dealers by mid-September. Oct. 10 is the deadline for postmarking this year's new punch-card applications. Hunters are urged to apply early to aid the Department in its handling of applications which are expected to total about 250,000. Cards will be machine-processed to "draw" successful applicants for over-subscribed areas.

Good? Well, Mr. Denton, it's up to you and me to see that some good comes of it. Let's zone the moon against TV commercials for deodorants. Let's set Mars aside as a place where there are no telephones, and a man can just go and "set."

Hog farmers could take lessons from two Missouri hog raisers — Harold Melcher and Jack Miller, president and vice-president, owners and

operators of Skyview Farms near Trenton, Mo.

These two gentlemen previously had no experience in animal production, both felt that there was a profit potential in producing hogs along

was a proint potential in producing nogs along modern management principles.

But before starting their hog production operation they corresponded with livestock experts from meat packing companies, feed manufacturerers and leading agricultural schools. This confirmed their opinion that full use of modern know-how in hog production had yet to be utilized.

Originally the plant was set up to produce meat type market hogs on a year-round basis.

Now, more than four years later, their ultra modern farm facilities and scientific breeding program combine to produce a distinctively fine hog carcass as well as furthering development of the recognized qualities of a large litter size, ruggedness and high feed conversion. Animals are outstanding examples of the success of the

farm's program.

Heading up this complex operation is general manager George Watson, a native of Edinburgh, Scotland. Watson was persuaded to bring his 25 years of purebred swine breeding knowledge to the U. S. and to the Missouri farm. The record proves the value of his know-how and

At the present time, the operation farrows 12 months of the year and try to farrow about 100 sows per month. "This year, we intend to hatch 10,000 to 11,000 pigs," said Watson. "Last year we aimed for 10,000 and hit it. We've increased this slightly for 1963."

HERE'S HOW THE SET-UP OPERATES:

Sows are kept in small groups of 25 in breeding quarters. They are brought by trailer to the farrowing pens about 7 days before farrowing. Here they are washed thoroughly and put into the individual pens.

After the pigs are born, they have their needle teeth clipped, the navel cord is dressed with dis-

The young pigs stay at the nursery until they're 8 weeks old. They are then transferred to the growing area and are then vaccinated for cholera and erysipelas. At approximately 5 to 5½ months of age, the top quality gilts are shipped out to swine breeders throughout the U.S. The boars and gilts (not suited for breeding) are shipped to a meat packing plant in Kansas City and purchased on a merit basis.

"We buy the ingredients and make up our own rations," Watson explained. The young pigs are started on an 18% ration at 10 days and receive that until they reach 40 pounds. "From then until they reach 125 pounds, we feed them a 14% ratios and effect 155 pounds, we feed them a 14% ration and after 125 pounds they are fed a 12% mixture. Although the farm consists of 105 acres at the main farm plus 80 acres nearby, they grow only a very small percentage of the grain they use. "We feed 325 tons of feed a month here," Watson said. "To keep the huge operation running smoothly requires 9 men plus a steady truck driver and myself," he added. Much of the work is handled with push buttons. amount of concrete throughout the operation. For one thing all floors are concrete and are hosed down daily, when weather permits, and the manure-water mixture drains into three different lagoons. Two of these sewage lagoons are 270 square feet and the third is larger. During the winter months, more straw and shavings are used which would clog the drain pipes, so manure is hauled out and spread during the winter.

Boars from the herd have been entered in both the University of Missouri and the Palmyra, Missouri boar testing stations. "We also rely heavily on data from Swift on our whole shipments for determining the direction we're going on breeding," Watson continued.

"Sanitation and vaccination go hand-in-hand in our program," Watson went on. "When gilts are ready to be shipped out to breeders, they are re-vaccinated by our local veterinarian for cholera, erysipelas and leptospirosis." Breeding stockis selected mostly by Watson with assistance from the managers of the purebred Yorkshire and Hampshire herds.

by M. Vandervelde

"Going, going, — gone!" The auctioneer and his bidders stood clustered around an old country schoolhouse. "Sold to L. E. Johnson." The auction chant stopped and the crowd scattered.

The passing of country schools has marked the end of an era—a step forward in educational methods and a challenge to

American ingenuity to put the vacated buildings to practical use. Many have been turned into homes, with more or less success—

depending on the imagination gone into the re-doing.

This is the story of one such rebirth which changed the atmosphere of readin', writin' and 'rithmetic to an aura of home, hearth and hospitality. The old school that fell under the auctioneer's hammer to the L. E. Johnson family, turned as if by magic into a bright and shining, modern home. A yard sign now bears the name, "Pleasant Place."

With the auctioneer's musical "sold" ringing in their ears, the family went into action with drawing board and pencil. I well

family went into action with drawing board and pencil. Lyell and daughter-in-law Betty were the architects, and soon turned out workable plans.

Remodelling brought no serious structural problems. A new concrete basement had been put under the school only a few years before. New foundations had been poured at that time and oak floors laid. These recent improvements and a sound super-structure were there to start with. In the old school the ceiling had been 11½ feet high, topped with attic. The house plans divided all this height as follows: first floor ceiling was 8' high; second story, 7½'; balance remained attic. To utilize the space under the second-story roof slant, a storeroom flanked upstairs

bedrooms on both sides.

Old fashioned high windows became modern picture windows. The first floor divided into light and airy kitchen, dining, living and utility rooms with plenty of storage built-ins. Second floor; two bedrooms, bath and storage rooms. A new automatic furnace was installed.

When size of rooms had been determined, Mrs. Johnson made all the rugs for her new home by hand. First she turned out a 9×12 oval-shaped earthbound rainbow to cover the living room floor. Next came stair treads of the same colorful materials for the open stairway. In quick succession followed several throw rugs to be used in doorways and other vulnerable spots. Perhaps the climax of all the rug making came with the one that appeared on the bathroom floor. Into it was woven the advice, "Wash out the tub." This bit of humor never fails to bring smiles from visitors.

Rug making wasn't exactly new with Mrs. Johnson, though it had never come in such a pleasant flurry before. Her hand-made rugs in homes of friends and relatives have long been evidence of art and generosity. Some have brought home blue ribbons

In another respect the bath at Pleasant Place is unusual. One wall is covered with a mural depicting a marshland, complete with brown cattails. This was painted by a nephew—head of the art department at Central College, Pella. Realistic touches have been added in the form of real butterflies and other insect

specimens which perch on the painted foliage.

Another unusual touch is an ivy vine with roots in the kitchen and top leaves in the living room! It winds its cheery way along kitchen and dining room walls, and on into the living room - a total of some thirty feet!

total of some thirty feet!

Not long ago a tourist who was driving along the highway stopped at Pleasant Place and knocked at the door. As a child he had attended school on this spot, and was full of tales of rural school days. To him, and to other grown-up school boys and girls who have fond memories of the old schoolhouse on the hill, it is a joy to see it transformed into this pleasant place!

L. E. Johnson made this coffee table from a slab from one of his walnut trees. It has a satiny finish which brings out the grain of the wood, in natural color.
